

Below is where we have performed the ingestion

1. Health Check

The screenshot shows the Postman interface with a collection named 'RAG MongoDB - Data Ingestion'. The first request, '1. Health Check', is a GET request to '[[baseUrl]] /api/health'. The response is a 200 OK status with a response time of 16 ms and a body of 314 B. The JSON response is:

```
{
  "status": "OK",
  "message": "Server is running"
}
```

2. Upload Excel - Test Cases

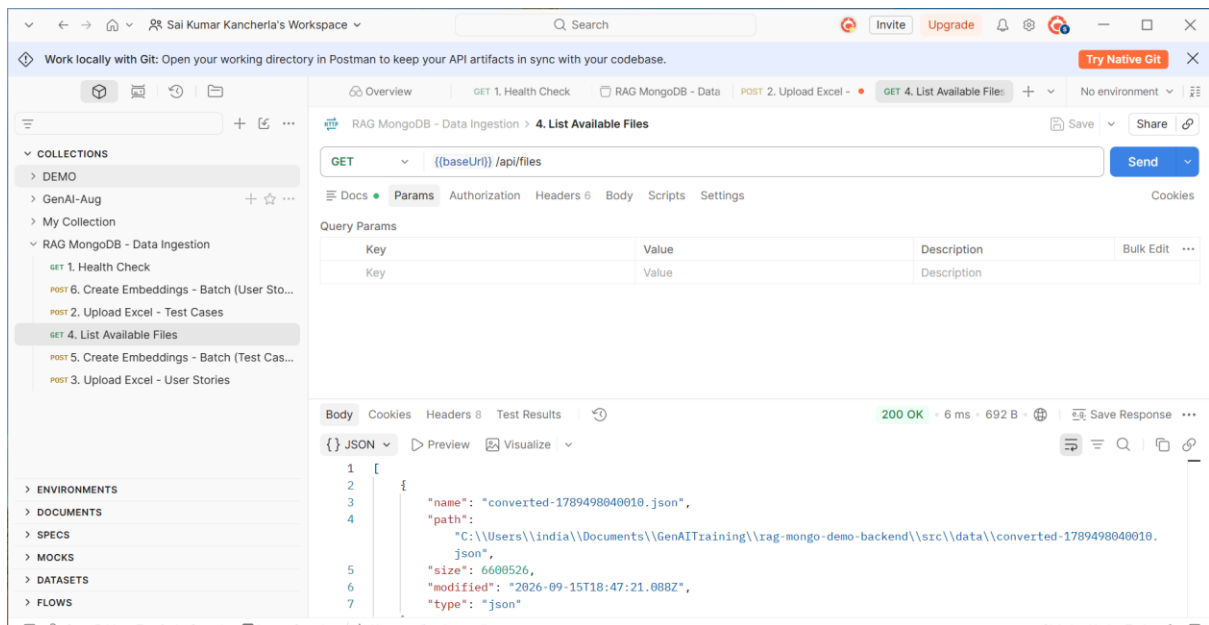

The screenshot shows the Postman interface with a collection named 'RAG MongoDB - Data Ingestion'. The second request, '2. Upload Excel - Test Cases', is a POST request to '[[baseUrl]] /api/upload-excel'. The request body is set to 'form-data'. The form data includes:

Key	Value	Description
file	testcases.xlsx	Excel file containing test cases
dataType	Testcases	Type of data: 'testcases' or 'userstories'

The screenshot shows the Postman interface with the same collection. The response of the POST request is a 200 OK status with a response time of 1.17 s and a body of 615 B. The JSON response is:

```
{
  "success": true,
  "message": "Test cases file converted successfully",
  "outputFile": "converted-1789498040010.json",
  "output": "Sheet 'Testcases' not found. Using first sheet: 'testcases'\nConverted 6354 rows from 'testcases' into C:/Users/india/Documents/GenAITraining/rag-mongo-demo-backend/src/data/converted-1789498040010.json"
}
```

4. List Available Files

Work locally with Git: Open your working directory in Postman to keep your API artifacts in sync with your codebase.

Overview GET 1. Health Check RAG MongoDB - Data POST 2. Upload Excel GET 4. List Available Files No environment

RAG MongoDB - Data Ingestion > 4. List Available Files
